

Aditya Sunit Joshi (M.Eng. Software Engineering)

Ottawa, Canada | Canadian PR | adityasjoshi96@gmail.com | +1(438)866-8552

To,
The Recruiter

I am a **Software Engineer/Developer** and am actively looking for a work opportunity in Software Development, typically **JavaScript, React, Java, Node.js** technologies, that would allow me to implement my skills.

I am currently working as a **Front End Web Developer** at **WorkJam Inc** in Montreal (Remotely from Ottawa) and my day-to-day tasks revolve around technologies like **HTML, CSS, Typescript, React.js, JavaScript, Tailwind CSS, Node.js, Java, Microservices, Docker, Kubernetes, API Integration, Swagger Documentation** etc. I have had experience of designing and developing **responsive UIs, building reusable components, curating end-to-end and unit tests using Jest, Storybook** etc. I work in an agile setting and thus I am aware of the scrum principles & ceremonies for software development.

Some of the courses I enjoyed learning about are Code Refactoring, Code Maintenance, Agile Methodology, Advanced Programming, Problem Solving, Data Structures, Software Design Patterns etc. Alongside academics, I have been keen at learning and implementing projects in Java 8+, JavaScript (React.js, Vue.js and ES6+), HTML5, CSS.

Additionally, I have about 3 years of work experience in the past as a **Salesforce Developer** where I got a rigorous hands-on experience on the Salesforce platform and its technologies such as **Visualforce, Lightning Aura and Web Components and Apex**. Based on my past work experience on Salesforce, I got a chance to pursue an internship as a Salesforce Developer while I was in the university.

My core strength, I believe, is to “make it work”, which means even though I am unfamiliar with the technology, I will do every effort to learn and adapt to it on the fly. I am flexible to mold to the given conditions, which I feel is one of the desired qualities in a person working in a team.

I am looking for a full-time opportunity where I would get a chance to implement my skills on the real world project scenarios thereby improving and diversifying my skill set and serving my employer with productive solutions.

I would like to request you to take a look at my profile as I apply for this position. [Here is my LinkedIn profile](#) for your reference. Please let me know if you find my profile interesting. Looking forward to hearing back from you! Thank you!

Best Regards,
Aditya Sunit Joshi
